DLP Functional Administrator

Profile

Data Loss Prevention specialist with five years in security operations at Societe Generale. Three years as an L1 DLP Analyst taught me to read an alert and tell signal from noise; as a DLP Functional Administrator I now sit on the other side of that, owning policy configuration, rule logic, and the day-to-day health of the platform. Alongside that, I build my own things in Python and on the web — day to day that means working with APIs in Python and leaning on AI coding tools like Claude Code and GitHub Copilot, which is where most of my curiosity goes lately. Before security I worked live sound — where I learned to stay calm when something breaks in front of an audience.

Experience

- **DLP Functional Administrator Societe Generale** 2021 – present
Own the functional side of the Data Loss Prevention platform: policy and rule configuration, detection tuning, and change management. Translate business and compliance requirements into working detection logic, and support the analyst team on escalations and false-positive reduction.
- **L1 DLP Analyst Societe Generale** 2018 – 2021
Triaged and investigated data loss prevention incidents as first-line response, qualifying alerts, escalating confirmed cases, and documenting outcomes. Worked to consistent SLAs in a follow-the-sun security operations team.
- **Sound Technician Holograf** 2018 – present
Freelance live sound work on weekends and event dates. Coordinate crews of 5–6 people per event, consistently meeting or exceeding the band's expectations.
- **Sound Technician Stage Expert** 2016 – 2020
Freelance live sound for events. Learned what it means to work with a crew toward a common goal in the live industry.

Education

- **Engineer** Politehnica University of Bucharest 2019 – 2021
Faculty of Electronics, Telecommunications and Information Technology
- **High School Diploma** National College "Mihai Viteazul" 2015 – 2019

Certificates

ITIL v4 Foundation

PeopleCert · 2025

Core IT service management concepts and the ITIL 4 service value system — how demand, value, and continual improvement connect across a service lifecycle.

Network Essentials

Cisco Networking Academy (NetAcad)

Planning and installing a home or small-business wireless network and connecting it to the internet; verifying and troubleshooting network and internet connectivity.

Introduction to IoT

Cisco Networking Academy (NetAcad)

How digital transformation creates economic opportunity, and the security concerns to weigh when implementing IoT solutions.
